Females	4,126	3,983	3,884	3,783	3,742	3,669	3,559	3,596	3,563	3,506

Adapted from the Canadian Institute for Health Information Discharge Abstract Database (DAD)
<http://www.cihi.ca/CIHI-ext-portal/internet/EN/Home/home/cihi000001>. Accessed on July 10, 2012.

Hospitalization rates for all causes for males and females 0 to 19 years of age declined between 2001/02 and 2010/11. For males there was a 15% decline and for females a 16.1% decline. Improvements in the approaches to care and the quality of care, as well as health care reform, contributed to the decline in hospitalizations.

Note: The figure presented here excludes all newborns born in the reporting facility and some newborns born outside the reporting facility but admitted to that facility within 24 hours of birth.
